# **Restore Database Backup**

### To Restore the database backup made by using 'Overwrite Previous Backup'

- 1. Click the menu item *Restore Database Backup*;
- 2. You will be asked to enter WRS Password;
- 3. Then, a system prompt asking you to make sure no one is using the **WRS App** if your installation is **LAN**. If so, ask them to log-out;
- 4. A progress bar showing the realtime progress of the restore process.

## Manual Restore of Backup Files

#### You use this option

(1) if Wrs cannot run because of corrupted data and;

(2) if the backup data from *OverwritePrevious Backup* is also corrupted)

1. In case, *Wrs App* cannot run the '*Restore Database*' for some reason, exit *Wrs* and using Windows Explorer, manually browse for the 2 different backups located at:

## a. "c:\lianja\backupdata\refillingdat\", and "c:\lianja\backupdata\system\";

## b. "\data\backups\Year\Month\Day\"

Decide which of the backup is the most recent, then

## Copy all the files to:

1. if your installation is stand-alone (only 1 PC), "c:\lianja\cloudserver\tenants\public\data\refillingdat\"

2. If your installation is LAN network (2 or more PC), "P:\data\refillingdat\"

where:

P = network drive letter

Also, if system database is corrupted, you can restore the backup files from:

"c:\lianja\backupdata\system\" and copy all the system data files to:

- 1. if your installation is stand-alone (only 1 PC), "c:\lianja\cloudserver\tenants\public\data\system\"
- 2. If your installation is LAN network (2 or more PC), "P:\data\system\"
