

WRS System Backup and Restore

There are two ways to make a system backup:

1. **Overwrite Previous Backup** - old backup is overwritten by the new backup. It saves hard disk space but the drawback is, if the new backup has a corrupted files, it will overwrite the old but good ones with the corrupted files.
2. **Backup to New Folder** - backup is copied to a new folder separate from the previous. Everytime the backup is made, a new directory is created programmatically. The drawback, it requires more *hard disk space* everytime a backup is made. Solution to this problem is to delete older backups manually thru the usual *Windows Explorer* interface.

Access this facility from the **App Center**, go to **System Up-Keeping**, at the topmost section **WRS System Backup and Restore**, then click **Data Backup** (please refer to the screen shot below),

Lianja App Center v5.5.1 - UTF-8

The screenshot shows the 'WRS App System Up-keeping' interface. On the left is the EPFC logo and an 'Account Login' section showing the user is logged in as 'Wrs' with the role 'admin' and tenancy 'public'. The main content area is titled 'WRS System Backup and Restore' and contains a dropdown menu with the following options: 'Database Backup', 'Restore Database', 'Miscellaneous Setup', and 'About Wrs'. The 'Database Backup' option is selected, and a sub-menu is displayed with 'Overwrite Previous Backup' and 'Backup to New Folder' options. Below this is the 'WRS Supplies Item Type Definition Setup' section, which includes a table with the following data:

Item TYPE	Supplies Type
1	EQUIPMENT
2	FG
3	INSTRUMENT

To restore the backup files, WRS system has an easy interface to follow:

From the App Center, go to **System Up-Keeping**, at the topmost section and to the right of *WRS System Backup and Restore*, click **Restore Database** (please refer to the screen shot below),

Lianja App Center v5.5.1 - UTF-8

The screenshot shows the 'WRS App System Up-keeping' interface. The 'Database Backup' dropdown menu is now closed, and the 'Restore Database' option is selected, showing a sub-menu with 'Restore Database Backup'. The 'WRS Supplies Item Type Definition Setup' table is also visible, with the following data:

Item TYPE	Supplies Type
1	EQUIPMENT
2	FG
3	INSTRUMENT
4	MACHINERY

Setup the Help Files

During the WRS App installation, its system help files is likewise programmatically installed. However, some Windows versions, it was noted that these help files are being skipped. This facility provides the solution to that issue. To access, from the **App Center**, go to **System Up-Keeping**, at the topmost section and to the right of *WRS System Backup and Restore*, click **Miscellaneous Setup** (please see the screen shot),

Lianja App Center v5.5.1 - UTF-8

The screenshot shows the 'WRS App System Up-keeping' interface. The 'Miscellaneous Setup' option is selected in the 'WRS System Backup and Restore' dropdown menu, showing a sub-menu with 'Setup Help'. The 'WRS Supplies Item Type Definition Setup' table is also visible, with the following data:

Item TYPE	Supplies Type
1	EQUIPMENT
2	FG
3	INSTRUMENT

About WRS

This section displays the *product key* and discusses about the *program developer* and the *program itself*.

To access, from the **App Center**, go to **System Up-Keeping**, at the topmost section and to the right of *WRS System Backup and Restore*, click **Miscellaneous Setup** (please see the screen shot),
